Forever Insurance Agency

20/12/2021

Overview

It is an insurance agency related application prototyping Forever Insurance Agency is the name of the application which get the information of the peoples who are interested in the services from social media platform.
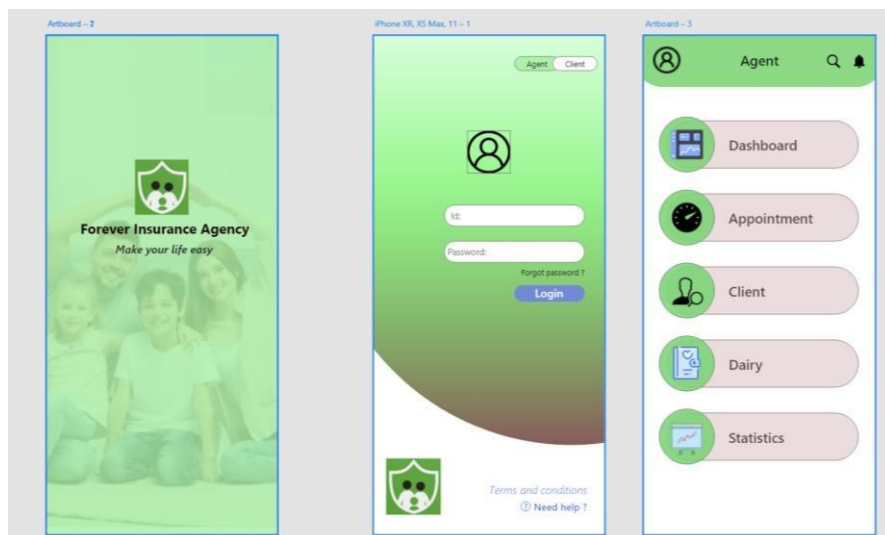

Approach perspective should be like person who need something, here my perspective towards the designing application is similar to that before starting doing wireframe these are the things I considered
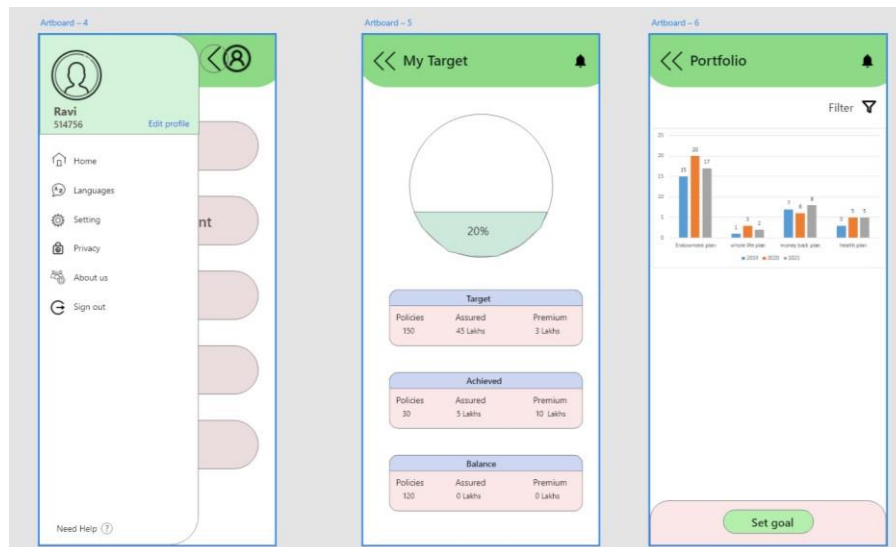

- Thinking in needy perspective
- Collection of data
- Relating data to each other
- Designing the application in user friendly way

Features

- This app is designed for both agency and client, at the top right corner of login page option for changing agent to client and vice-versa is provided.
- Help option is provided at bottom of the login page, sometimes agents not only forgetting their password they are also forgetting their user-id, they can able to access the help option.
- Agent can set their goals in this application this make them curious about their work.
- Agent diary is provided inside the application they can save their works and even work get erased they can able to retrieve them.

Wireframe

User Flow

- Application starts with one second slide image which is the first art board where the application name and logo is displayed.
- And in second art board is to choose agent or client and login page where person use there id and password to login
- Third art board consist of dashboard, client, appointment, diary and statistics of the agent
- Fourth art board shows the profile settings and basics setting of the agent and application
- Fifth art board showing that my target which is not shown in previous page because this is an subhead which is inside the dashboard of the agent
- Sixth art board shows the statistics of the agent which is also not shown in previous page this is also subhead inside the dashboard of agent
